

THE CLIMATE PROJECT AT ST. MICHAELS FARM

D&R Greenway Land Trust is pleased to announce our Partner in Preservation, Soil Carbon Partners (SCP).

SCP will be conducting research to refine and measure innovative Carbon Sequestration Protocols on St. Michaels Farm

The mission of Soil Carbon Partners is to produce nutrient-dense organic food, and sequester higher levels of carbon in the soil than are being achieved today. Sequestering Carbon in farmland is increasingly being recognized as a key strategy in helping slow climate change.

In April - May , **SCP** will be mixing their organic soil amendments here and then applying them to our soil. They “jump-start” the soil with trace minerals, organic matter, and beneficial microbes that ensure healthy plants and grasses and accelerate carbon sequestration.
